Product: Bookmarked — web-first digital home library and social reading platform

Live URL: <https://bookmarked.online>

Repository: Bookmarked monorepo (`apps/web` , `apps/mobile` , `supabase/` , `docs/`)

Document date: July 6, 2026

Total commits: 104 (May 2026 → July 2026)

Executive Summary

Bookmarked is a **web-first reading platform** where users search books, organize personal libraries on interactive shelves, track reading progress with journals and notes, write reviews, discover other readers, and participate in a social feed with posts, likes, comments, reposts, direct messages, and group chats.

The product ships as a **Next.js static export** deployed to **GitHub Pages** at the custom domain **bookmarked.online**, with **Supabase** providing authentication, PostgreSQL data, Row Level Security, file storage, and realtime subscriptions. Book metadata comes primarily from the **Open Library API**, with Google Books cover fallback and **Giphy** for GIF attachments in posts and messages.

Phases completed:

Phase	Scope	Status
Phase 0	Planning, schema, infra	✅ Complete
Phase 1	Core web MVP (auth, search, shelves, progress, reviews, dashboard)	✅ Complete
Phase 2	Public pages, polish, production launch	✅ Complete
Beyond plan	Social feed, messaging, posts, author pages, reading journal, notes, import	✅ Shipped
Phase 3	Mobile app foundation (<code>apps/mobile</code> scaffold)	🟡 Ready to start

The web application is **production-ready** and continuously extended. Mobile (React Native + Expo) is planned to reuse the same Supabase backend.

Technology Stack

Layer	Technology
Frontend	Next.js, TypeScript, Tailwind CSS
Backend	Supabase (PostgreSQL, Auth, RLS, Storage, Realtime)
Book data	Open Library API, Google Books (cover fallback)
GIFs	Giphy API (<code>NEXT_PUBLIC_GIPHY_API_KEY</code>)
Deployment	GitHub Actions → GitHub Pages → bookmarked.online
DNS	GoDaddy (GitHub Pages A records + www CNAME)
Mobile (future)	React Native + Expo (<code>apps/mobile</code>)

Supabase services used

- **Auth** — email/password, session JWT, client-side guard
- **PostgreSQL + RLS** — all tables secured per-user
- **Storage** — avatars, post images, message attachments
- **Realtime** — feed posts, notifications (optional messaging)

External API integration

API	Usage
Open Library	Search, works/editions, authors, covers, metadata refresh
Google Books	Cover fallback when Open Library has no art
Giphy	GIF search in posts, comments, messages, reposts

Chronological Development Timeline

- **Jul 6** — Global `/notes` search, public posts on profiles, catalog metadata refresh

Deployment Information

Hosting architecture

```
Git push to main
  → GitHub Actions (.github/workflows/deploy.yml)
  → npm install + validate-env (Supabase + Giphy secrets)
  → Next.js static export (apps/web/out/)
  → upload-pages-artifact
  → deploy-pages@v4 → GitHub Pages
  → bookmarked.online (GoDaddy DNS)
```

Required GitHub Actions secrets

Secret	Purpose
<code>NEXT_PUBLIC_SUPABASE_URL</code>	Supabase project URL (baked at build)
<code>NEXT_PUBLIC_SUPABASE_ANON_KEY</code>	Supabase anon key (baked at build)
<code>NEXT_PUBLIC_GIPHY_API_KEY</code>	Giphy API for GIF search

DNS (GoDaddy)

- **A records:** `185.199.108.153` , `185.199.109.153` , `185.199.110.153` , `185.199.111.153`
- **CNAME** `www` : `DekuWorks.github.io`

- **HTTPS:** Enforced after DNS propagation via GitHub Pages

Static export constraints

- Query-based routes: `/book/?id=` , `/reader/?username=` , `/messages/thread/?id=` , `/author/?key=`
- `public/.nojekyll` prevents Jekyll processing
- Full-page navigation on static export (no client-side router-only nav for some flows)
- All data access client-side via Supabase JS client

Local development

```
cd apps/web
cp .env.local.example .env.local
# Set NEXT_PUBLIC_SUPABASE_URL, NEXT_PUBLIC_SUPABASE_ANON_KEY, NEXT_PUBLIC_GIPHY_API_KEY
npm install
npm run dev
```
